Canadian Radium and Uranium Site
Mount. Kisco, New York

U.S. ENVIRONMENTAL PROTECTION AGENCY
Removal Support Team 3
CONTRACT # EP-S2-13-01

Gamma survey was conducted using Ludlum-2241.
Background gamma values = 7,500 - 9,500 counts per minute (cpm).

Notes:
Radon sampling was conducted using charcoal canisters. The U.S. Environmental Protection Agency's (EPA) Site-Specific Action Level (SSAL) for radon = 4.0 picocuries per liter (pCi/L).

Wipe samples collected/analyzed by EPA. Wipe samples were analyzed for Alpha (α)/Beta (β) counts.

EPA OSC:	E. DALY
RST SPM:	B. NWOSU
